**USB-C RECHARGING**

### WEARABLE SAFETY DEVICE

Working in rescue, maintenance or low-visibility situations makes intervention even more dangerous. Sirena has developed **LUMINA**, the new wearable safety device, designed to make the operator visible in any situation while carrying out his work.

Thanks to its compact design and rugged polyamide construction, **LUMINA** has an IP67 protection rating that is highly resistant to water and dust. Despite rain, snow and adverse conditions, **LUMINA** will always maintain its luminous efficiency.

## WEARABLE SAFETY DEVICE

### MAXIMUM SAFETY AND VISIBILITY

LUMINA is developed with 12 powerful LEDs that guarantee complete 360° illumination. Thanks to 4 practical buttons, it is possible to control the switch-off of each side, thus avoiding being dazzled by the light emitted by the device. The special polycarbonate lens is also designed to prevent glare even for those standing in front of the worn device.

### SEVERAL LUMINOUS EFFECTS + TORCH MODE

LUMINA is available with LEDs in different colours. By pressing the central button several times, you can choose the desired luminous effect from those available, or use the torch function that illuminates only one direction with a white light beam.

Magnetic plate  
to wear under clothes

### EASY AND COMFORTABLE TO WEAR

The powerful magnet at the base of LUMINA allows the device to be easily attached to any magnetic surface.

2 different supports allow easy application on any type of uniform and/or clothing.

Practical  
magnetic clip

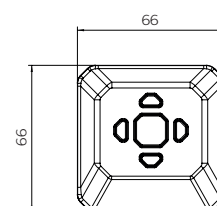

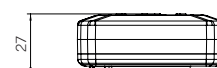

### USB-C RECHARGING

The 1000 mAh - 3.7V lithium-ion battery allows up to 5 hours of continuous use (depending on the selected functionality) . The device can be recharged via USB-C cable (included in the package).
