

SD100

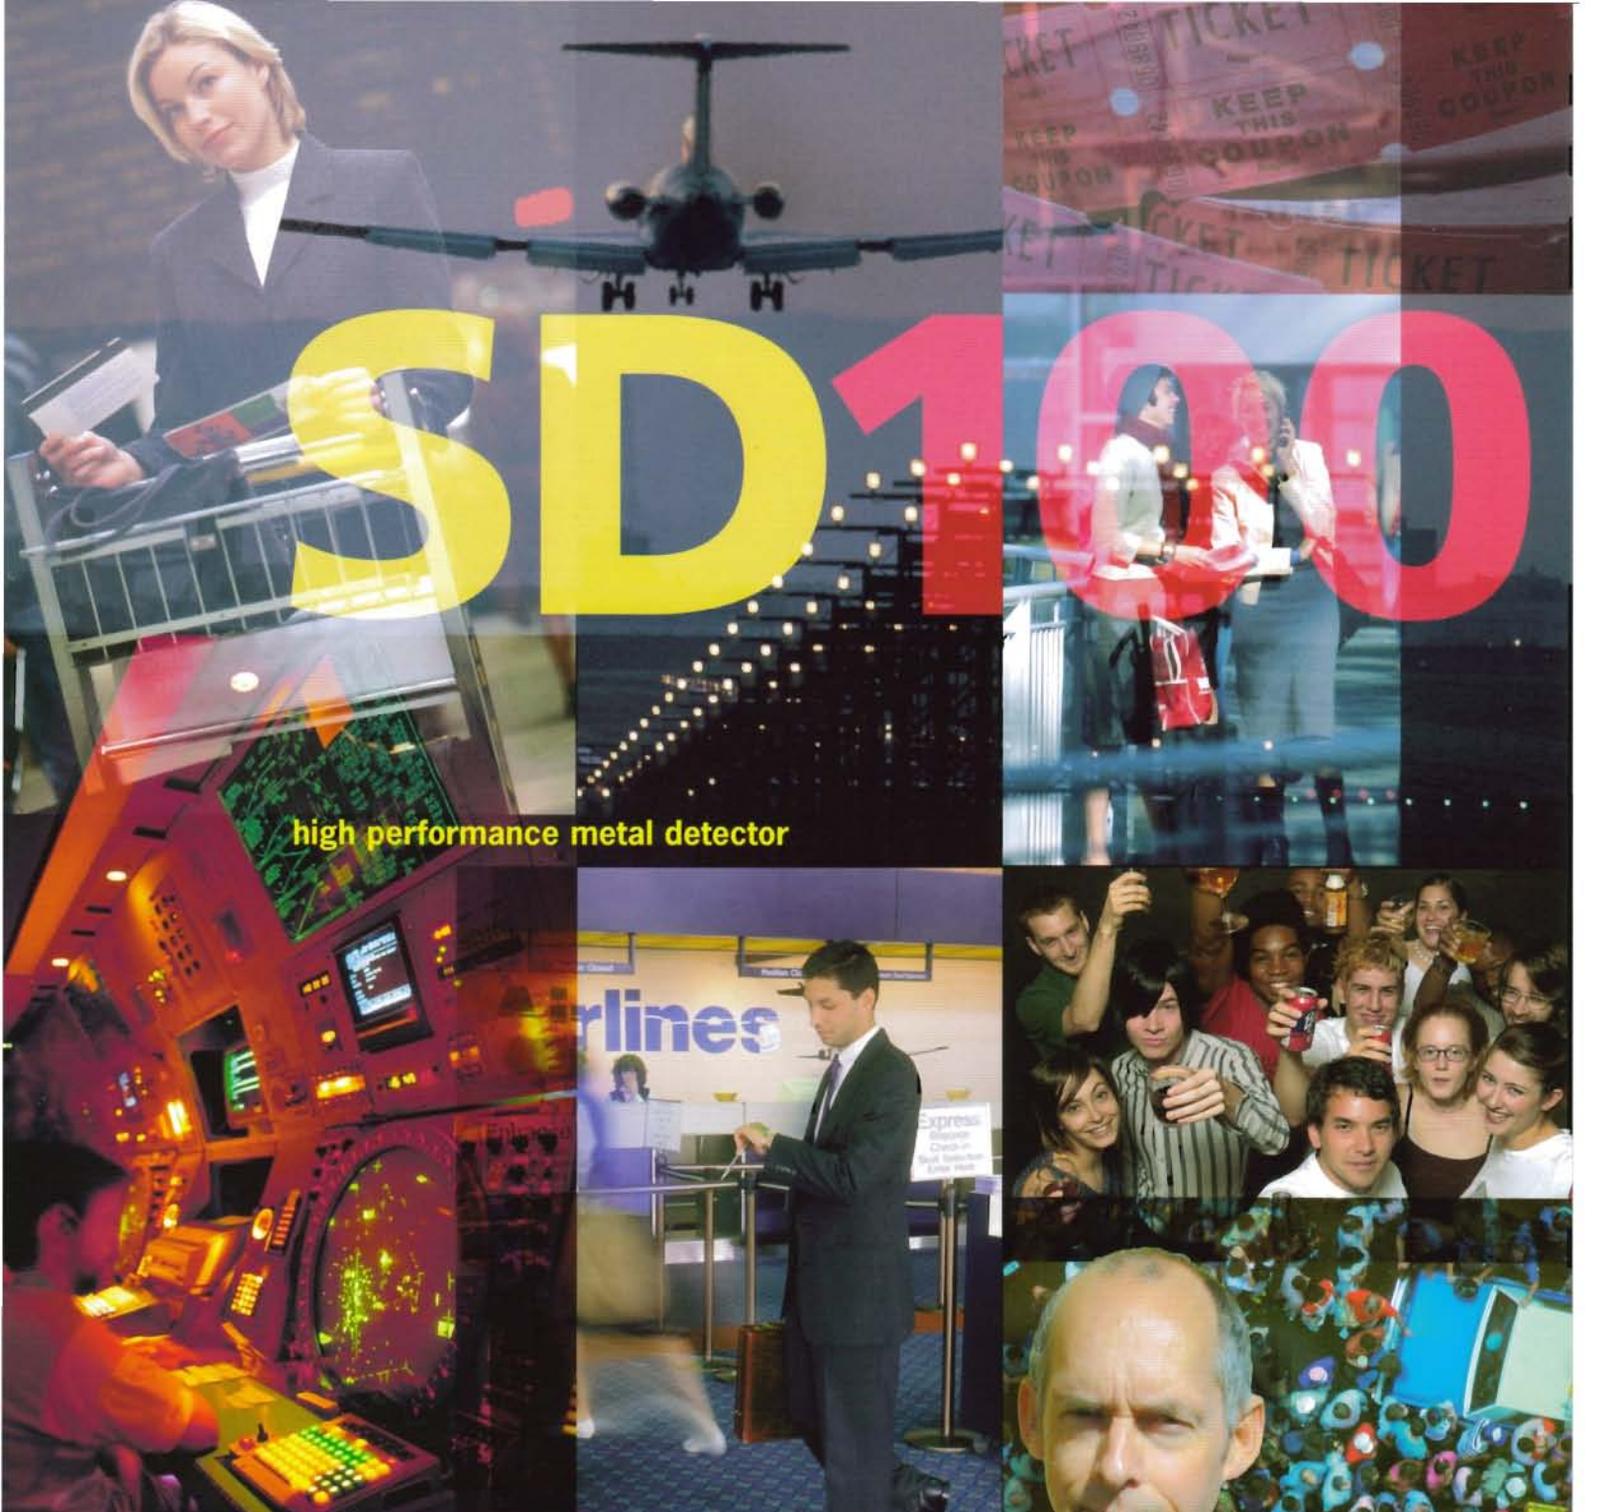

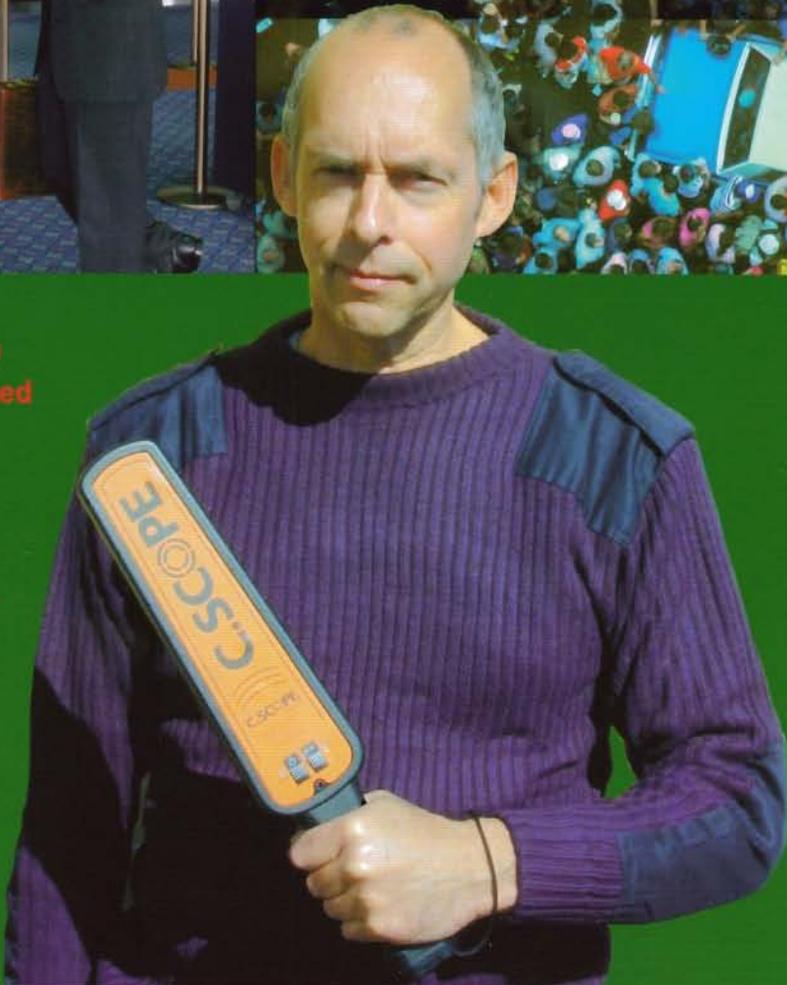

high performance metal detector

C.SCOPE

The SD100 is a high performance metal detector specifically designed for security applications.

The SD100 is for use by security operatives in airports, nightclubs, schools, shopping centres, crowd and custodial situations.

The SD100 is powerful help in the search for potentially dangerous metal objects hidden about the person.

SD100

side holster

The SD100 is an extremely high performance metal detector designed by C.SCOPE to meet the exacting needs of today's security industry. We understand the threat posed by even small metal objects such as needles and thin section blades.

We have taken hand-held metal detection technology to the limit and yet retained the familiar format and ease of use which are so important to the operator.

The SD100 is extremely lightweight at under 400 grammes yet robust and comfortable in the hand. Low power consumption is a special feature allowing a full day's work easily between battery change or recharge if using the optional rechargeable battery system.

The operator is alerted to the presence of

a metal target by a clear audio tone and an illuminated LED.

The normal sensitivity setting is fine for everyday use but a simple push button brings the Hi-Alert sensitivity into operation optimising detection range and small object recognition. The bold styling is a clear deterrent reinforcing the authority of the security operative.

The detector blade is the proven best shape for both body search and rummage search.

The SD100 is maximum technology in the front line of the modern day battle against those who would hide potentially dangerous metal objects with an intent to cause harm.

The SD100 is the indispensable metal detector for the security professional.
